ABSTRACTED-PUB-NO: FR 2811997 A1

BASIC-ABSTRACT:

NOVELTY - New compositions (A) contain heteroxylan(s) (I), partially replaced by thickening or gelling hydrocolloid(s) (II).

USE - The use of (A) is claimed as texturing agent in dispersions comprising at least two immiscible phases, specifically where at least one phase is liquid and the other is a gas. Also claimed are dispersions containing (A) (specifically at 0.1-2 wt. %), for use in the cosmetic, food, detergent, agrochemical, industrial formulation, pharmaceutical, construction material, drilling fluid or radical polymerization sectors. (A) especially improves the expanding properties of the liquid phase(s) of gas-containing dispersions (i.e. foams), and also improves the shear resistance of the liquid phase(s) and minimizes or suppresses natural aging phenomena (e.g. drainage, Ostwald ripening and coalescence) in the foamed dispersions. More generally (A) have texturizing, expansion promoting, emulsifying, stabilizing and thickening properties. Typically (A) is used in foamed food products such as yogurt, ice cream, fruit puree, chocolate or sauces.

ADVANTAGE - (A) has good texturizing and stabilizing effects at a low concentration. The properties can be controlled by varying the nature and content of (II). In foodstuff applications suitable choice of (I) and (II) can provide excellent organoleptic properties (e.g. mouth-feel and smoothness), so that (A) can totally or completely replace conventional texturizing components such as fats.

EQUIVALENT-ABSTRACTS:

POLYMERS

Preferred Composition: (I) is a secondary wall heteroxylan having a highly branched structure, preferably an arabinoxylan. In particular

(I) is an arabinoxylan extracted from maize bran and having a main chain of xylose units, 45-60 wt. % of which are substituted by 25-40% arabinose groups, 5-10% galactose groups, 5-10% glucuronic acids and 0-1% residues of ferulic acid (or its salt). (I) has molecular weight 50000-500000 (preferably 100000-350000). (II) is starch, araban, alginate, carrageenan, cellulose (or its derivative), chitosan, dextran, dextrin, fructosan, galactan, galactomannan, gum arabic, pectin, ghatti gum, galactoside, xanthan gum, glucan, glycan, glycogen, hemicellulose, hyaluronic acid, inulin, laminarin, levan, cellulose microfibrils, mannan, pentosan, polydextrose or xylan, especially xanthan gum, carob, carrageenan, pectin or cellulose microfibrils. (A) contains (I) at 50-90 wt. % and (II) at 10-50 wt. %.

ORGANIC CHEMISTRY

Preferred Components: (II) include threose, erythrose, xylose, ribose, desoxyribose, rhamnose, fucose, glucosamine, galactosamine, N-acetyl-glucosamine or N-acetyl-galactosamine.

A foamed acidic yogurt was prepared from heat treated milk by adding 1.1 wt. % (based on milk) of a mixture of arabinoxylan and xanthan gum in weight ratio 10/1 under stirring. After stirring for a few minutes, the mixture was cooled to 43degreesC, inoculated, fermented for 6 hours and stored at 5degreesC overnight. After 24 hours the mixture was foamed using a mixer then stored in a refrigerator at 5degreesC. The degree of foaming was ca. 100% (i.e. 1 liter of gas in 1 liter of continuous phase). The appearance, texture and taste were at least equivalent to those of conventional gelatin-containing foamed yogurts. The foams were stable, and showed no signs of macroscopic destabilization (drainage) on storage for 28 days.
